## **NumPy Basics**

Learn Python for Data Science Interactively at <a href="https://www.DataCamp.com">www.DataCamp.com</a>

## NumPv

The NumPy library is the core library for scientific computing in Python. It provides a high-performance multidimensional array object, and tools for working with these arrays.

Use the following import convention:

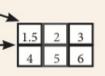

>>> import numpy as np

#### NumPy Arrays

# 3D array

## **Creating Arrays**

```
>>> a = np.array([1,2,3])
>>> b = np.array([(1.5,2,3), (4,5,6)], dtype = float)
>>> c = np.array([[(1.5,2,3), (4,5,6)], [(3,2,1), (4,5,6)]],
                 dtype = float)
```

#### **Initial Placeholders**

>>>	np.zeros((3,4))
>>>	np.ones((2,3,4),dtype=np.int16)
>>>	d = np.arange(10,25,5)
>>>	np.linspace(0,2,9)
>>>	e = np.full((2,2),7)
>>>	f = np.eye(2)
>>>	np.random.random((2,2))
>>>	np.empty((3,2))

reate an array of zeros reate an array of ones reate an array of evenly

aced values (step value) reate an array of evenly paced values (number of samples) reate a constant array

reate a 2X2 identity matrix reate an array with random values Create an empty array

#### 1/0

## Saving & Loading On Disk

```
>>> np.save('my array', a)
>>> np.savez('array.npz', a, b)
>>> np.load('my array.npy')
```

#### Saving & Loading Text Files

>>>	np.loadtxt("myfile.txt")	
>>>	np.genfromtxt("my_file.csv", delimiter=',')	1
>>>	np.savetxt("myarray.txt", a, delimiter=" "	')

## **Data Types**

>>	> np.int64	Signe
>>	> np.float32	Stand
>>	> np.complex	Comp
>>	> np.bool	Boole
>>	> np.object	Pytho

d 64-bit integer types lard double-precision floating point olex numbers represented by 128 floats an type storing TRUE and FALSE values on object type

>> b.ndim	Number of array dimensions
>> e.size	Number of array elements
>> b.dtype	Data type of array elements
>> b.dtype.name	Name of data type
>> b.astype(int)	Convert an array to a different type
	·

Array unificitisions

Length of array

### **Asking For Help**

/// a.snape

>>> len(a)

>>> np.info(np.ndarray.dtype)

### **Array Mathematics**

#### **Arithmetic Operations**

>>> g = a - b array([[-0.5, 0. , 0. ],	Subtraction
[-3. , -3. , -3. ]])	200
>>> np.subtract(a,b)	Subtraction
>>> b + a	Addition
array([[ 2.5, 4. , 6. ],	
[ 5. , 7. , 9. ]])	
>>> np.add(b,a)	Addition
>>> a / b	Division
array([[ 0.66666667, 1. , 1. ]] [ 0.25 , 0.4 , 0.5 ]	í)
>>> np.divide(a,b)	Division
>>> a * b	Multiplication
array([[ 1.5, 4., 9.], [ 4., 10., 18.]])	Sec. 2.3 € 1.50 (1.70 mile)
>>> np.multiply(a,b)	Multiplication
>>> np.exp(b)	Exponentiation
>>> np.sqrt(b)	Square root
>>> np.sin(a)	Print sines of an array
>>> np.cos(b)	Element-wise cosine
>>> np.log(a)	Element-wise natural logarithm
>>> e.dot(f)	Dot product
array([[ 7., 7.],	Dot product
[ 7., 7.]])	

#### Comparison

>>> a == b array([[False, True, True],	Element-wise comparison
[False, False, False]], dtype=bool)	
>>> a < 2 array([True, False, False], dtype=bool)	Element-wise comparison
>>> np.array_equal(a, b)	Array-wise comparison

#### Aggregate Functions

>>> a.sum()	Array-wise sum
>>> a.min()	Array-wise minimum value
>>> b.max(axis=0)	Maximum value of an array row
>>> b.cumsum(axis=1)	Cumulative sum of the elements
>>> a.mean()	Mean
>>> b.median()	Median
>>> a.corrcoef()	Correlation coefficient
>>> np.std(b)	Standard deviation

## **Copying Arrays**

>>> h = a.view()	Create a view of the array with the same data
>>> np.copy(a)	Create a copy of the array
>>> h = a.copy()	Create a deep copy of the array

## **Sorting Arrays**

```
Subsetting
                            1 2 3
                                        Select the element at the 2nd index
>>> a[2]
                                         Select the element at row o column 2
>>> b[1,2]
                                          (equivalent to b[1][2])
 6.0
Slicing
                                         Select items at index 0 and 1
>>> a[0:2]
 array([1, 2])
                                         Select items at rows 0 and 1 in column 1
>>> b[0:2,1]
 array([ 2., 5.])
                                         Select all items at row o
>>> b[:1]
                                         (equivalent to b[0:1, :])
  array([[1.5, 2., 3.]])
                                         Same as [1,:,:]
>>> c[1,...]
  array([[[ 3., 2., 1.], [ 4., 5., 6.]]])
>>> a[ : :-1]
array([3, 2, 1])
                                         Reversed array a
Boolean Indexing
                                         Select elements from a less than 2
>>> a[a<2]
                             1 2 3
 array([1])
Fancy Indexing
>>> b[[1, 0, 1, 0], [0, 1, 2, 0]]
                                         Select elements (1,0), (0,1), (1,2) and (0,0)
 array([ 4. , 2. , 6. , 1.5])
>>> b[[1, 0, 1, 0]][:,[0,1,2,0]]
                                         Select a subset of the matrix's rows
 array([[4.,5.,6.,4.],
[1.5,2.,3.,1.5],
[4.,5.,6.,4.]])
                                          and columns
```

#### **Array Manipulation**

Tr	ansposing Array	
>>>	i = np.transpose(b)	Pe
>>>	· i.T	Pe

Changing Array Shape >>> b.ravel() >>> g.reshape(3,-2)

## Adding/Removing Elements

>>> h.resize((2,6)) >>> np.append(h,g) >>> np.insert(a, 1, 5) >>> np.delete(a,[1])

Combining Arrays

>>> np.concatenate((a,d),axis=0) array([ 1, 2, 3, 10, 15, 20]) >>> np.vstack((a,b)) array([[ 1. , 2. , 3. ], [ 1.5, 2. , 3. ], [4.,5.,6.]]) >>> np.r\_[e,f] >>> np.hstack((e,f)) array([[ 7., 7., 1., 0.], [ 7., 7., 0., 1.]]) >>> np.column stack((a,d)) array([[ 1, 10], [ 3, 20]])

>>> np.c [a,d]

# Splitting Arrays

>>> np.hsplit(a,3) [array([1]), array([2]), array([3])] >>> np.vsplit(c,2) [array([[[ 1.5, 2., 1.], array([[[ 3., 2., 3.], [ 4., 5., 6.]]])]

rmute array dimensions ermute array dimensions

Flatten the array Reshape, but don't change data

Return a new array with shape (2,6) Append items to an array

Insert items in an array Delete items from an array

Concatenate arrays

Stack arrays vertically (row-wise)

Stack arrays vertically (row-wise) Stack arrays horizontally (column-wise)

Create stacked column-wise arrays

Create stacked column-wise arrays

Split the array horizontally at the 3rd

Split the array vertically at the 2nd index
